SKINSECRET Hand Cream

Clinically proven results

As skin gets older it normally becomes more difficult to moisturize. In more exposed parts, such as the hands, this is even more difficult. In addition, one of the signs that give an indication of the age of the skin is decreased homogeneity in skin tone.

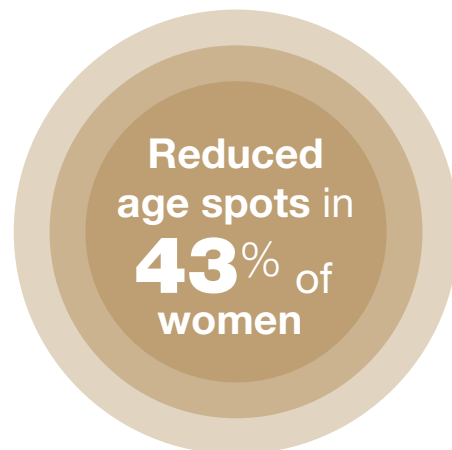

In order to test the SKINSECRET Hand Cream we asked 32 volunteers with age ranging between 45 and 60 to use it on a daily basis twice a day for 28 days.

Measurements of skin moisture conducted using a corneometer showed **a 20% increase in skin moisturization.**

A high number of users **(43.8%)** spontaneously stated that throughout the study SKINSECRET hand cream **reduced age spots.**

It was proven that the SKINSECRET Hand Cream offers **intense moisturization and helps the skin of the hands look younger.**

Over 93% of women convinced by their usage experience

There was great consensus concerning the cosmetic properties of SKIN-SECRET Hand Cream: **over 93% of users said they were satisfied or very satisfied.**

Over 96% of women felt their skin more moisturized and softer and said that the cream was quickly absorbed.
